The Founders' Second Amendment

by Halbrook

Do Americans have a God-given right to bear arms? Or is this power vested solely in government? Recent years have seen a sea change in scholarship on the Second Amendment. Beginning in the 1960s, a view emerged that individuals had a “right” to bear arms only in militia service — a limited, “collective” right. But in the late 1980s, Dr. Stephen Halbrook and a handful of other scholars began producing an altogether persuasive analysis that changed thinking on the matter so that today, even in canonical textbooks, bearing arms is acknowledged as an individual right. The Founders’ Second Amendment
by Halbrook

Do Americans have a God-given right to bear arms? Or is this power vested solely in government? Recent years have seen a sea change in scholarship on the Second Amendment. Beginning in the 1960s, a view emerged that individuals had a “right” to bear arms only in militia service — a limited, “collective” right. But in the late 1980s, Dr. Stephen Halbrook and a handful of other scholars began producing an altogether persuasive analysis that changed thinking on the matter so that today, even in canonical textbooks, bearing arms is acknowledged as an individual right. In this provocative book, author G. Edward Griffin compiles the evidence that cancer is the result of a dietary deficiency in a substance known as vitamin B-17. Purified for cancer treatment, this substance is also known as Laetrile. Could this substance be one of the keys to unlocking a cure for cancer? Treatment with Laetrile is banned by the FDA. Griffin poses the question of whether or not investigations into the efficacy of the substance have been stymied by entrenched interests in the healthcare industry.
